

Tutorial: cine-connect

CinéConnect is a **movie platform** enabling users to *discover films, manage watchlists and favorites, and engage in real-time discussions*. It features a *robust backend* (Express.js with PostgreSQL) handling server logic and user authentication, complemented by a *dynamic React frontend* for a smooth user experience. Movie details are sourced from a *third-party API (TMDB)*, and live chat is powered by *real-time communication*.

Conclusion

CinéConnect successfully integrates a robust backend with a dynamic frontend, providing users with a seamless movie discovery and discussion platform. The project demonstrates effective use of modern web

technologies, real-time communication, and third-party API integration, while also addressing challenges related to authentication, state management, and deployment. Future improvements could include enhanced recommendation algorithms, additional social features, and further optimization of the user experience.
